

BRILLIANCE DIMMER

For optimum performance:

1. Select the best AC transformer to provide 12VAC to the Dimmer and LED's.
2. Install the 12VAC LED dimmable products with the transformer power off.
3. Turn on the transformer. Turn the dimmer dial switch to the "on" position.
4. Using a small Phillips screwdriver, adjust the trim pot switch so the LED's are at their lowest brightness.
5. Adjust the dial switch to the desired illumination level.

Note: All 12V LED devices will dim differently. The trim pot switch will need to be adjusted for wattage loads and or 12V dimmable LED products. The Brilliance LED dimmer is made for 12VAC Transformers only. Do not exceed 120 WATTS on the field load.
